

About me

I am Sharad Mainaly. I am a GIS Cartographic Specialist. I have a decade long experience of working as a medical personnel in vision health industry. Working as an ophthalmic tech, I helped thousands of people to restore their vision going hand in hand with physicians. My passion started to grow on eye-brain system functions; how objects are seen and how brain perceives these objects. To advance my experiences to new level, I decided to learn more on low-level/high level cognitive process, our brain's ability to identify, organize and process visual information. It was an awakening moment for me, which made me realize the importance of visualization. I wanted to use this opportunity to rebuild myself as a Cartographer. With GIS cartographic skills learned from Fleming College's Post-Graduate program, I am super excited to visualize data by designing aesthetically appealing maps.
